EDUCATION

Rochester Institute of Technology

Honors B.S. in Information Technology | GPA: 3.70 | Dean's List (6 semesters)

Rochester, NY

Expected Dec 2026

EXPERIENCE

Software Engineer Intern

Ezre LLC

May 2026 – Present

Remote, Washington, DC

- Designed a tipping flow around a **Square POS** lock on captured transactions, vaulting cards via Square tokenization and posting gratuity as a separate transaction (**React Native**, **Rails**); presented it to **Square engineering**, stayed out of **PCI-DSS** scope, and let blind customers tip independently.
- Developing a **Clover POS** integration ingesting itemized transaction data from merchant terminals, adding the segment's largest processor (**20%** share, **175K+** locations) and more than doubling Ezre's addressable market.
- Supported Ezre's live deployment at the **NFB 2026** National Convention (**2,000+** receipts processed); triaged field reports from blind testers and shipped a fix for payment fields hidden from **VoiceOver**.

Tech Lead

Crafty Studio's Collaboratory, Client Platform (RIT Capstone)

Jan 2026 – Present

Rochester, NY

- Turned an external client's open-ended request into a makerspace platform serving **1,000+** members as solutions architect and primary client contact, directing a **seven-person** team.
- Built the **REST API** layer in **Java/Spring Boot**, securing all roles with **Spring Security**, **OAuth 2.0**, and **Auth0**, and modeled **PostgreSQL** schemas for membership, access logs, and payments.
- Replaced a manual, staff-supervised entry process with automated **RFID** door access, verifying membership, training, and waivers synchronously while decoupling logging and side effects through **AWS SQS**, **EventBridge**, and **Lambda** to keep downstream failures off the door's critical path.
- Building the **Stripe** billing integration end to end on an **event-driven** pipeline (**EventBridge**, **SQS**, **Python Lambdas**) into a **Spring Boot** service that owns all writes, with an insert-first idempotency guard ensuring **exactly-once** payment records under at-least-once delivery.
- Designed failure detection for billing: a daily **reconciliation job** replaying missed events from Stripe's Events API and a weekly **auditor** diffing local membership state against Stripe.

Software Engineer

Gestion y Sistemas

Jan 2026 – May 2026

Remote, Lima, Peru

- Developed **.NET** API services for clinical case state transitions from submission through **Azure AI Vision** image validation and correction, appending correction history instead of overwriting records.
- Designed the product's end-to-end **UI/UX** in **Figma** for the Doctor and Laboratory profiles, then integrated **Microsoft Entra ID** via **MSAL** into the **.NET** auth layer with token-based sessions and **RBAC**, shipping features in **Angular** on a remote **Agile** team.

Technology Advisory Assistant, SAP S/4HANA Cloud Migration

KPMG

Jun 2025 – Dec 2025

Lima, Peru

- Supported the migration of **SAP S/4HANA** workloads to **Azure** Brazil, consolidating **12** instances to **3** and unblocking integration with Peru's national banking API via its IP whitelist.
- Automated separation-of-duty security auditing across **600+** roles and **1,000+** transactions with **SQL** and **ABAP** validation queries, surfacing access conflicts across three business units that manual review had missed.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript/JavaScript, SQL, Ruby, C#

Backend & Distributed Systems: Spring Boot, Ruby on Rails, Node.js, .NET, REST APIs, event-driven architecture, OAuth 2.0/JWT, JPA

Cloud: Azure (Entra ID, API Management, AI Vision), AWS (Lambda, SQS, EventBridge, EC2, RDS, S3)

Data & Tooling: PostgreSQL, SQL Server, MySQL, Docker, Terraform, Git, CI/CD, JUnit, Postman, Agile

Frontend & Mobile: React Native, React, Angular, HTML/CSS, WCAG 2.1 accessibility
